RESPONSE TO AMENDMENT

1. Applicant's amendment filed 8 September 2003 is acknowledged. Claims 46, 47, 49, 50, 77-89, 92, 93, 95-100, 107, 108, 114, 120, and 151-157 are pending and under examination in this office action. The text of those sections of Title 35, U.S. Code, not included in this action can be found in a prior office action.

Information Disclosure Statement

2. The information disclosure statement filed 8 September 2003 has been considered in full. The '730 patent is lined through because it has already been made of record by the Examiner.

Claim Rejections Withdrawn

2. The rejection of claims 46, 49, 77-82, 84, 85, 114, 120, and 153 as anticipated by the '497 patent is withdrawn in response to Applicant's amendment and argument that the '497 patent does not teach selective expression of ephrin A1 and B1 and eph A2 and B1 and because these molecules do not appear to be selectively expressed.

3. The rejection of claims 47, 50, 80, 81, 88, 89, 92, 95-100, 107, 108, and 152 as anticipated by the '730 patent is withdrawn in response to Applicant's amendment and argument that the correct filing date is March, 1999. The PCT document is not applied because it does not teach angiogenesis and thus does not anticipate the claims as amended.

New Grounds of Rejection

4. Claims 46, 49, 77-86, 114, 120, and 153-155 are newly rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for methods involving ephrin B2 and eph B4, does not reasonably provide enablement for all ephrins and ephs. The specification

Art Unit: 1646

does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

These claims require that the ephrins and ephs used be selectively expressed on arterial or venous cells. However, while other ephrins and ephs, such as ephrin A1, ephrin B1, eph A2, and eph B1 have been identified as being involved in angiogenesis, they do not appear to be selectively expressed. Were they to be, the '497 patent would in fact anticipate the invention, because this expression would be inherent and Applicant's claims do not require that the assays be performed using arterial and venous cells, only that the molecules used be selectively expressed. Since neither the '497 patent nor the subsequent art teaches selective expression, and since neither the art nor Applicant teaches selective expression of any other ephs or ephrins, it is not predictable that such molecules exist. Thus, while the techniques for identifying other molecules that could be used as claimed are straightforward, neither the art nor Applicant provides an expectation of success. The provision of art-recognized procedure is not adequate guidance as to what other molecules are selectively expressed, but is merely an invitation to the artisan to use the current invention as a starting point for further experimentation. What is provided is thus the idea for an invention, and the invitation to experiment to implement this invention, not the invention itself.

CLAIMS 46, 49, 77-86, 114, 120, AND 153-155 ARE REJECTED. CLAIMS 47, 50, 88, 89, 92, 93, 95-100, 107, 108, 151, 152, 156, AND 157 ARE ALLOWED.
